Understanding and Configuring Dynamic ARP Inspection - Cisco

Introduction to Triggers. You can write triggers that fire whenever one of the following operations occurs: DML statements (INSERT, UPDATE, DELETE) on a particular table or view, issued by any userDDL statements (CREATE or ALTER primarily) issued either by a particular schema/user or by any schema/user in the databaseDatabase events, such as logon/logoff, errors, or startup/shutdown, also ...

Triggers - Oracle

validate comes with a set of builtin validators that you can just require and use, but it doesn't end there. All of those are just simple predicates - functions of data into boolean, which denotes if data is valid. You can easily write your own or use any function in this shape from any library you already have, like `_.conformsTo` from lodash or higher order functions and chains like `R.cond` ...
