Total Project Control A Practitioners

Quality control, is about evaluating whether the product of your project meets the quality standards. It is performed after the product has been completed. According to the PMBOK Guide, 5th edition, "Control Quality is the process of monitoring and recording results of executing the quality activities to assess performance and recommend necessary changes."

Project management is the process of leading the work of a team to achieve all project goals within the given constraints. This information is usually described in project documentation, created at the beginning of the development process. The primary constraints are scope, time, and budget. The secondary challenge is to optimize the allocation of necessary inputs and apply them to meet pre ...

Community-led total sanitation (CLTS) is an approach used mainly in developing countries to improve sanitation and hygiene practices in a community. The approach tries to achieve behavior change in mainly rural people by a process of "triggering", leading to spontaneous and long-term abandonment of open defecation practices. It focuses on spontaneous and long-lasting behavior change of an ...
